

How to Propose: An Introduction

NASSP, 1 April 2009

The most important slide

If you have any questions or problems with
any of the proposal tools, **do not hesitate**
to send an email to

salthelp@saa0.ac.za

A first attempt for a proposal

Shall I compare thee to a summer's day?

Thou art more lively and more temperate.

But thy eternal summer shall not fade

Nor lose possession of that fair thou owest.

Might be suitable for your loved one,
but definitely *not* for SALT...

A second attempt for a proposal

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<Proposal id="2007-1-RSA-015" final="false" Version="0.52"
    PrincipalInvestigator="dibnob@sao.ac.za"
    PrincipalContact="dibnob@sao.ac.za">
  <Title>
    Occultation of Triton
  </Title>
  <Abstract>
    SALTICAM in slotmode will be used...
  </Abstract>
</Proposal>
```

You surely don't want to write this yourself!

RIGHT OF ADMISSION RESERVED

So how do you get your proposal
beyond this door?

The proposing process

1. Plan your observation.
2. Create your proposal.
3. Submit your proposal.
4. Check and accept your proposal.
5. If necessary, resubmit your proposal.
6. Hope for good weather.
7. Receive your data.

Plan your observation

- What do you need to do?

There are two simulators which can help you in deciding about your instrument configuration:

Salticam Simulator

RSS Simulator

There also is a tool for creating slit masks, but this won't be discussed here.

Plan your Observation

- When and how long can your target(s) be observed?

There is a tool for checking the visibility:

Visibility Tool

Create and (re-)submit your proposal

There is a tool for assisting you when creating,
submitting or resubmitting a proposal:

Principal Investigator Proposal Tool (PIPT)

Check and accept your proposal

Your proposal can be checked and accepted with a dedicated online tool:

Web Manager

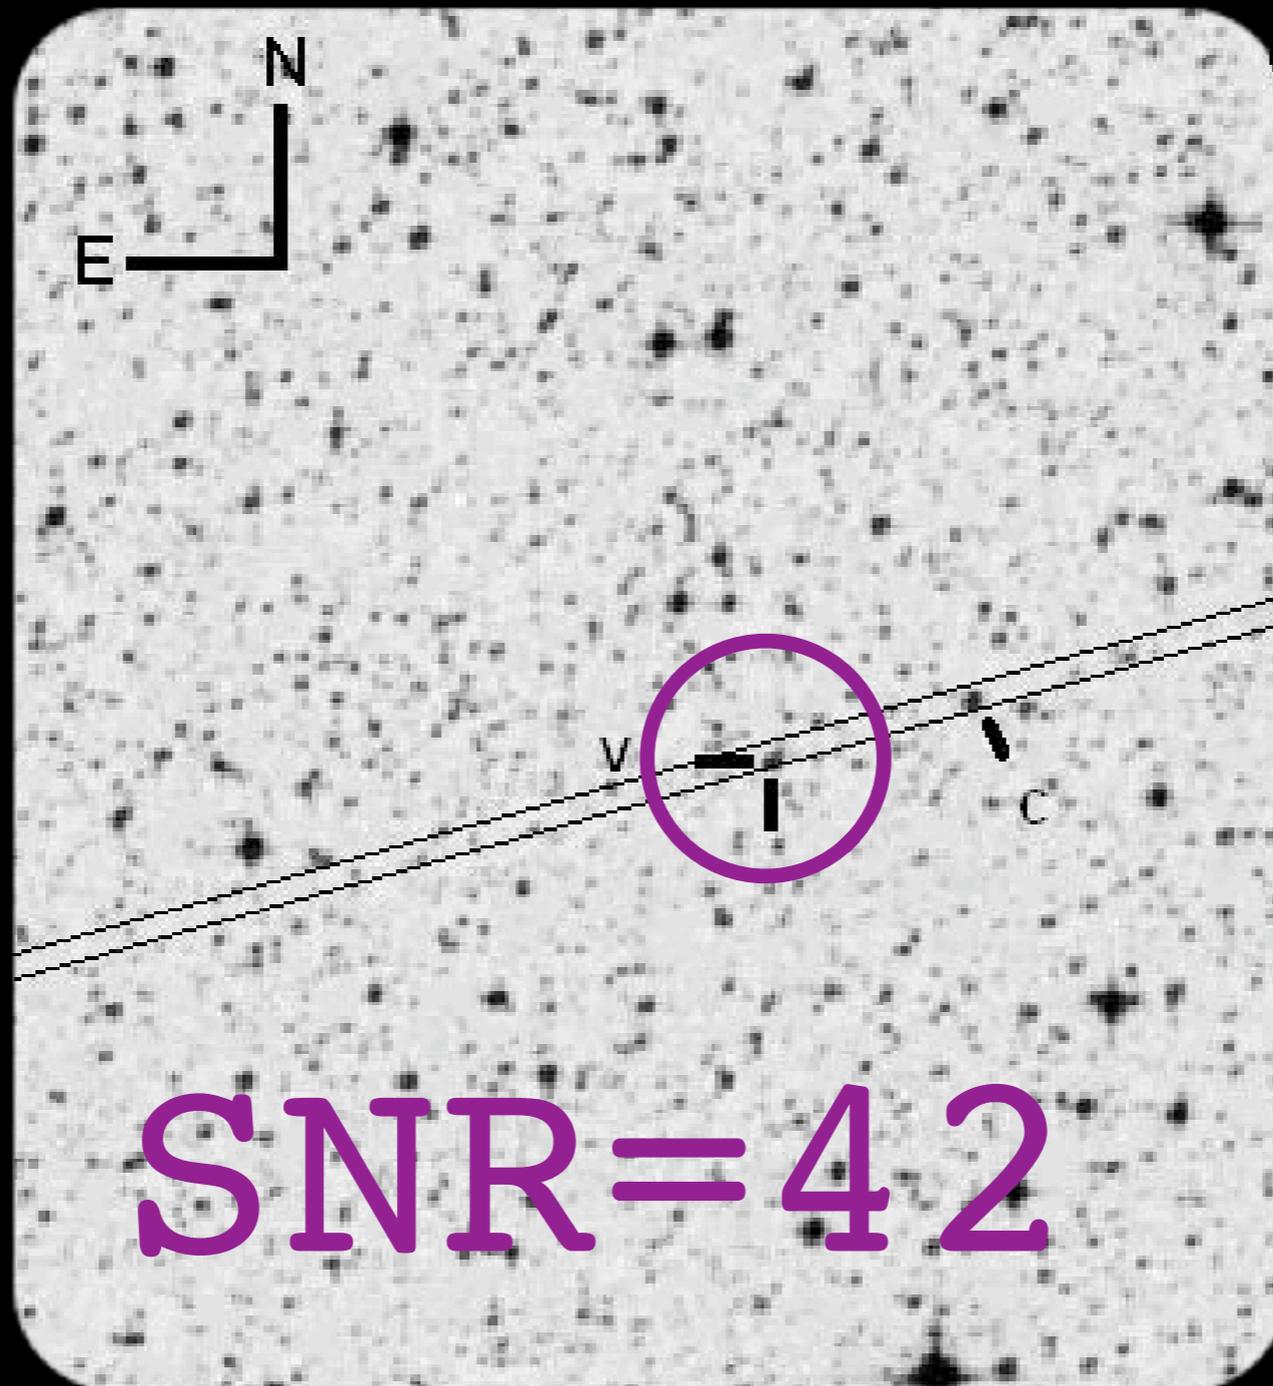

Hope for good weather

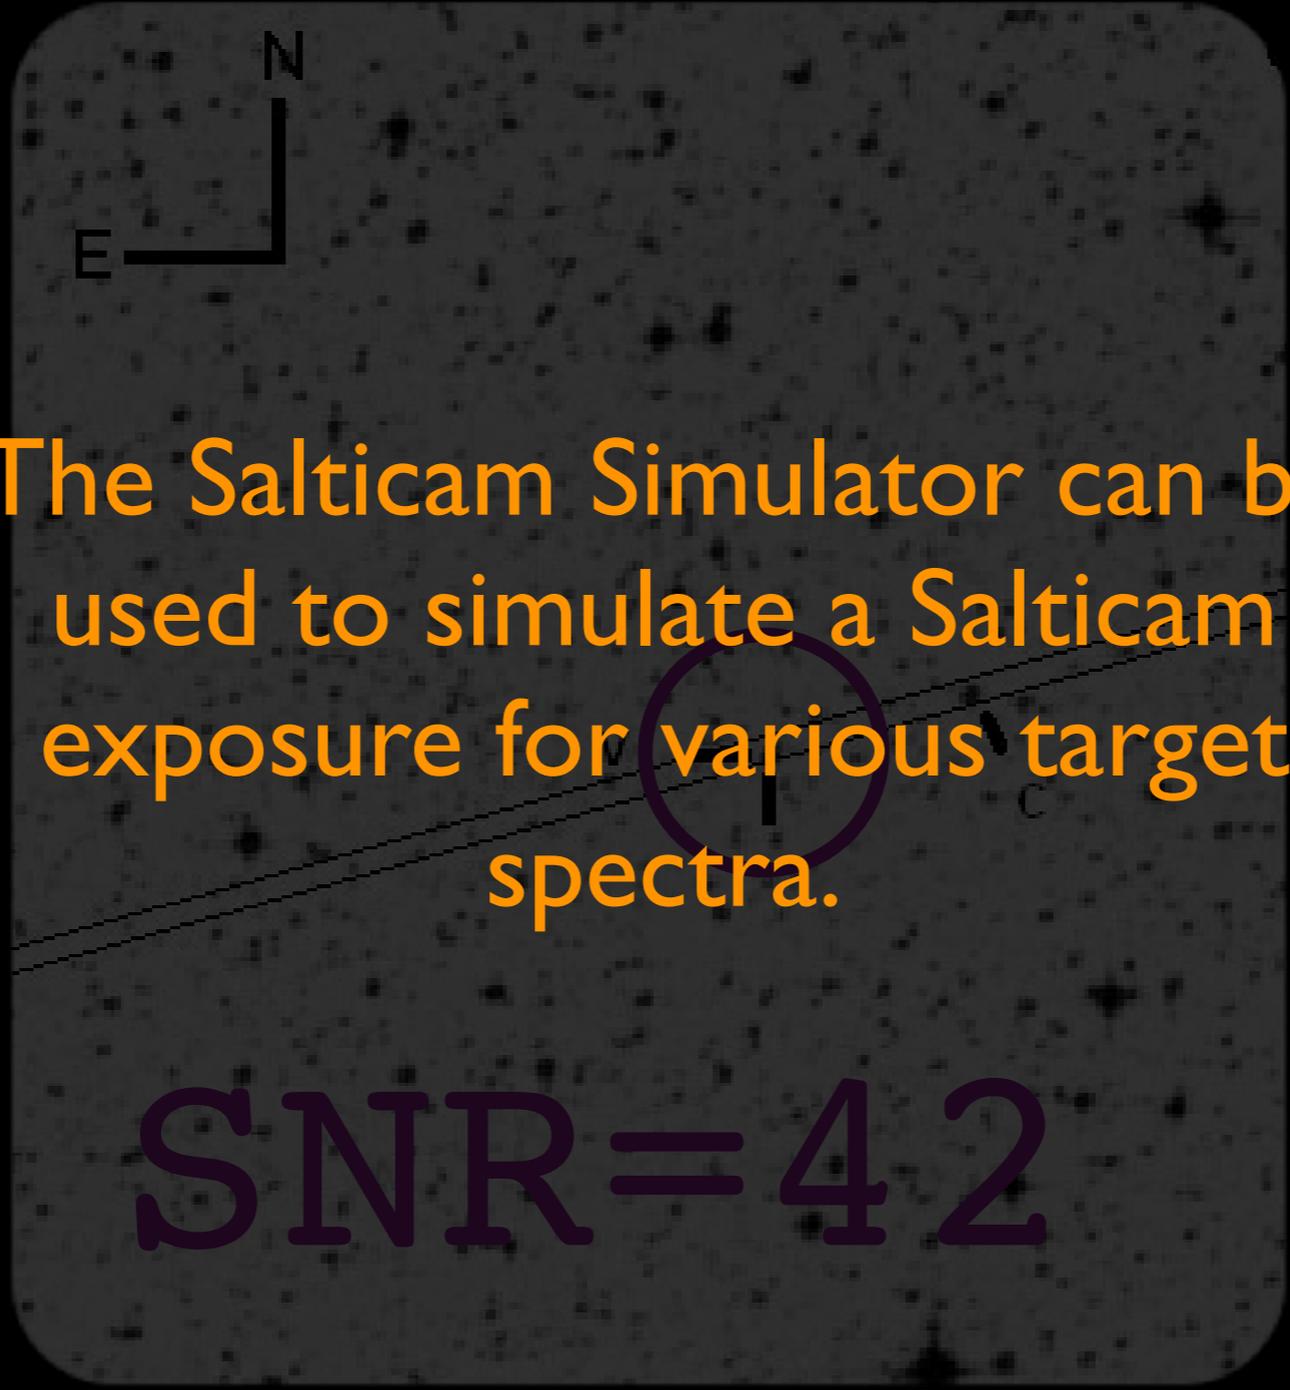

Receive your data

...This is beyond the scope of this talk ...

Salticam Simulator

Salticam Simulator

The Salticam Simulator can be used to simulate a Salticam exposure for various target spectra.

SNR=4.2

Visibility Tool

Visibility Tool

The Visibility Tool tells you when and for how long a target can be observed with SALT.

time

Target:

Date: Mar 31 2009 2454922

The night begins on 31 March.

α : 12 h 0 m 0.0 s δ : - 0 ° 0 ' 0.0: "

Sun set: 16:38 UT Sun rise: 04:37 UT
Evening twilight: 17:56 UT Morning twilight: 03:19 UT
Moon set: 18:58 UT Moon rise: 08:35 UT

22%

Source Availability:

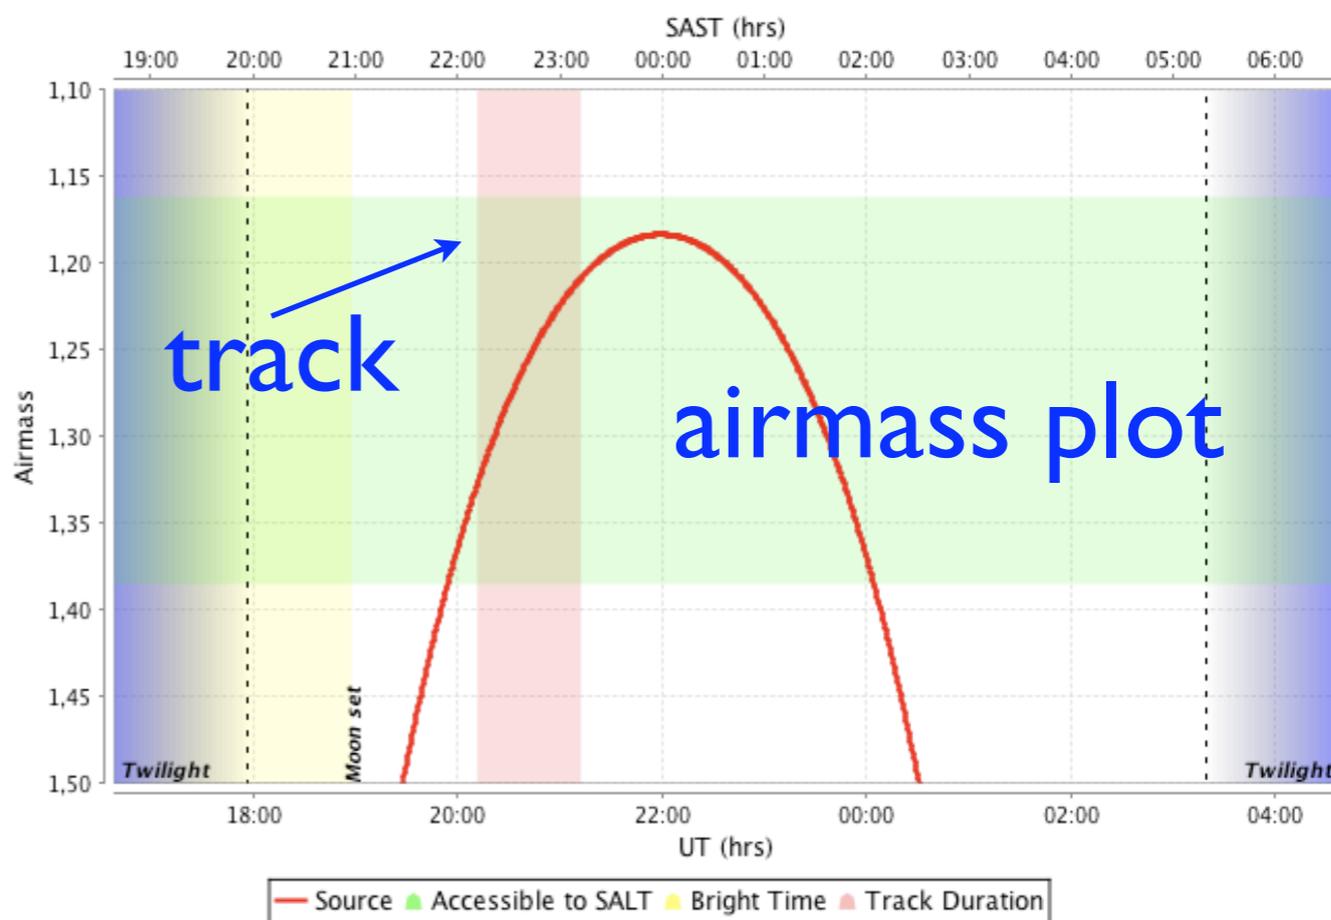

Start: 19:56 UT Stop: 00:05 UT Δt : 14,957s

Track Time Remaining:

Start: 20 : 11 : 28 UT Duration: 3,646s

Moon and Sun

Nightly Visibility Annual Visibility

Target:

Date: 2454922

The night begins on 31 March.

α : h m s δ : $^{\circ}$ $'$ $''$

Sun set: 16:38 UT Sun rise: 04:37 UT
 Evening twilight: 17:56 UT Morning twilight: 03:19 UT
 Moon set: 18:58 UT Moon rise: 08:35 UT

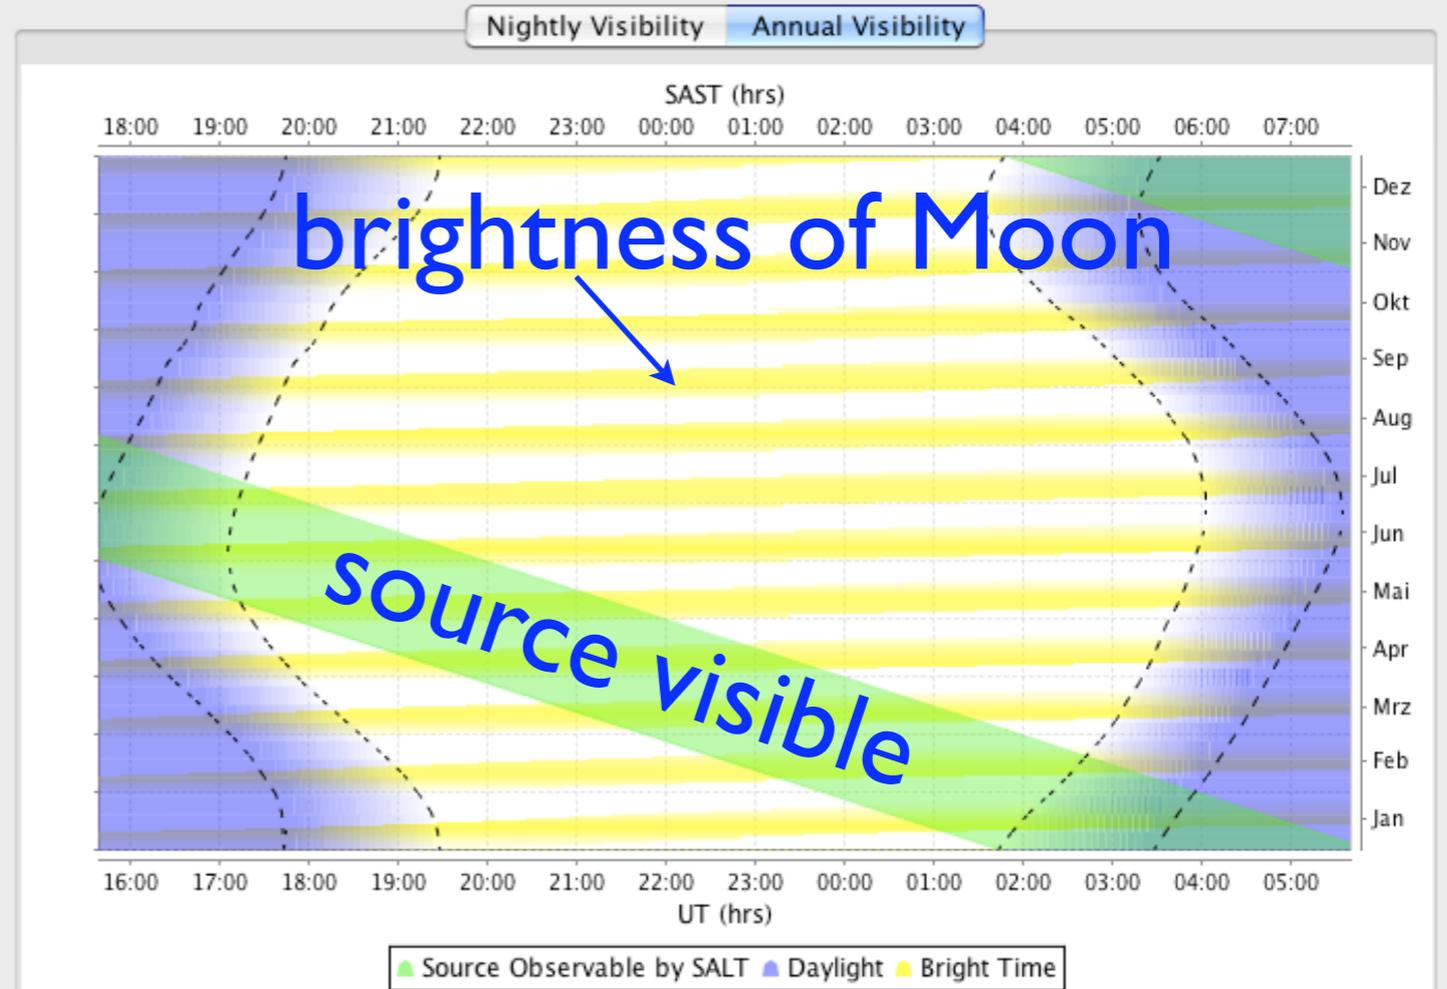

22%

Source Availability:

Start: 19:56 UT Stop: 00:05 UT Δt : 14,957s

Track Time Remaining:

Start: : : UT Duration: 3,796s

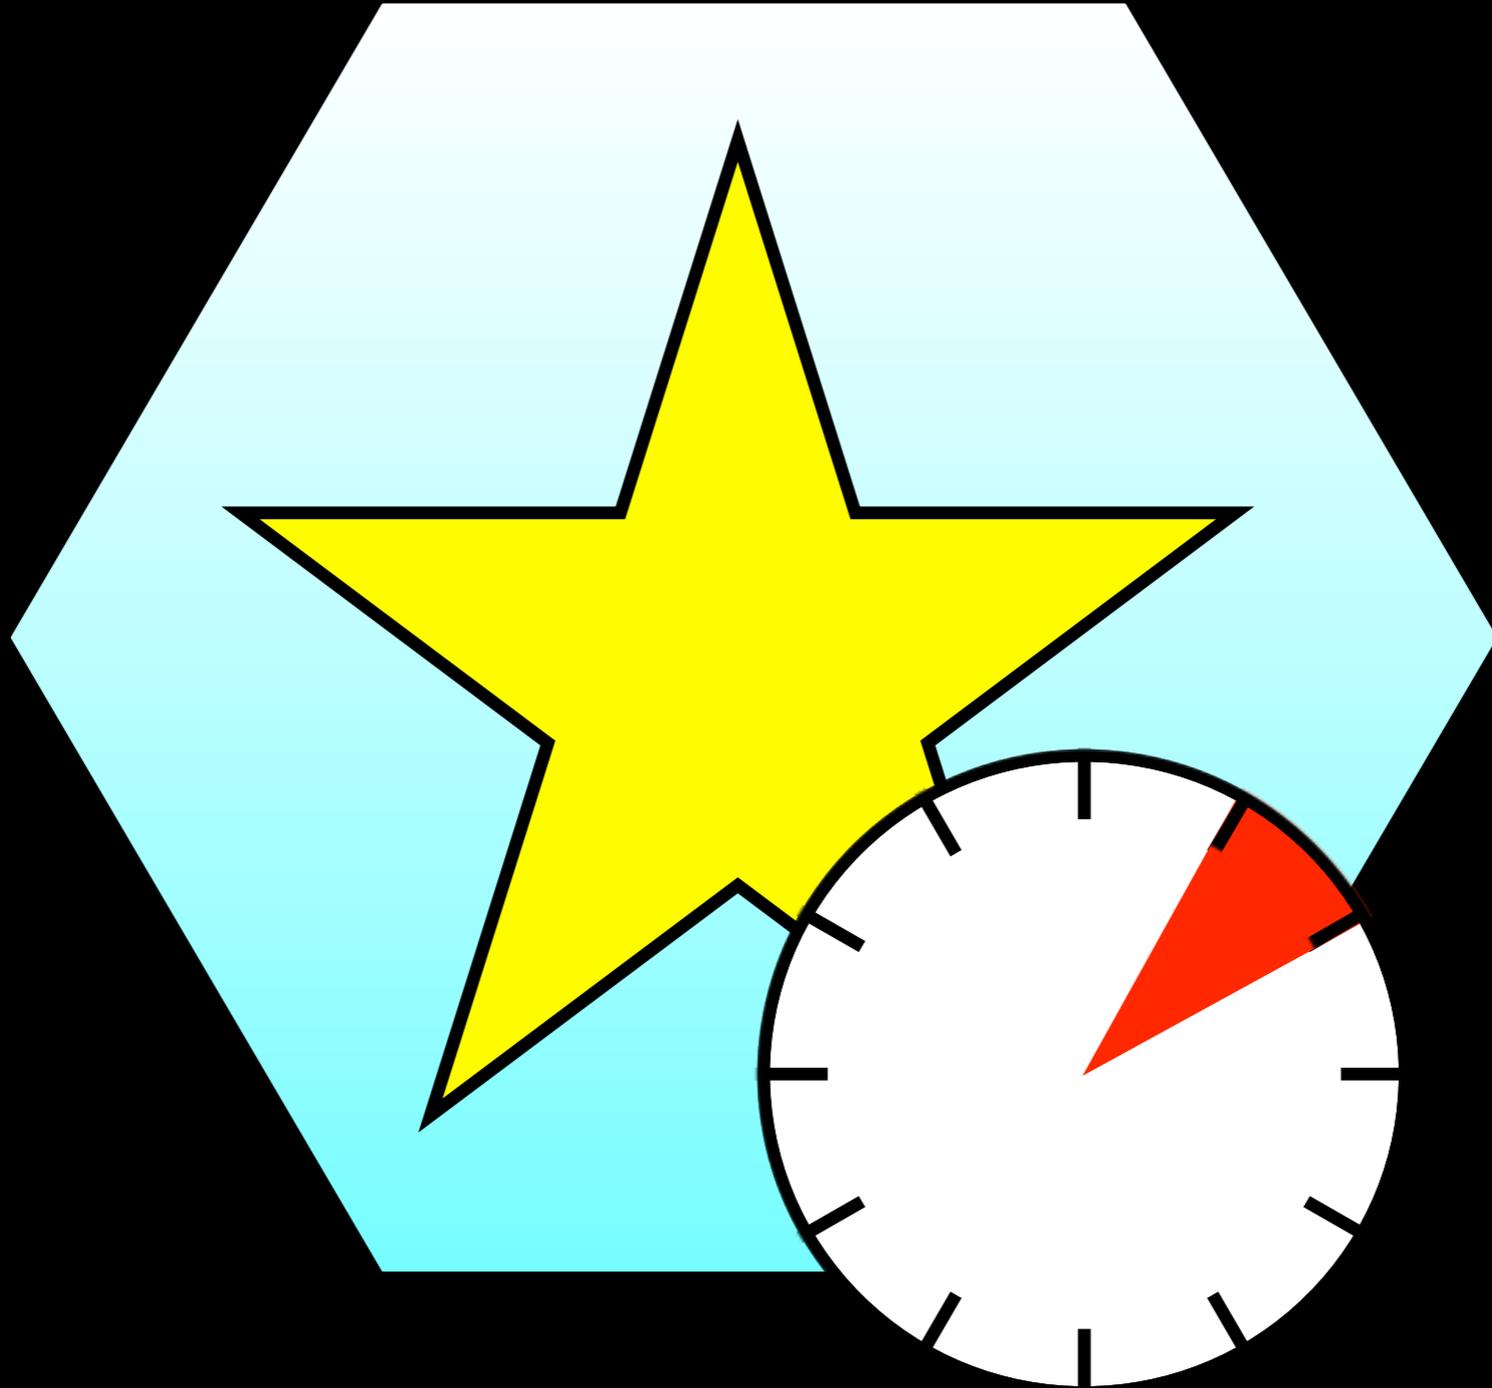

Beware!

Note that the Visibility Tool tells you what the **phase** of the Moon is, but not **how close** it is to your target!

This will be improved in the next version.

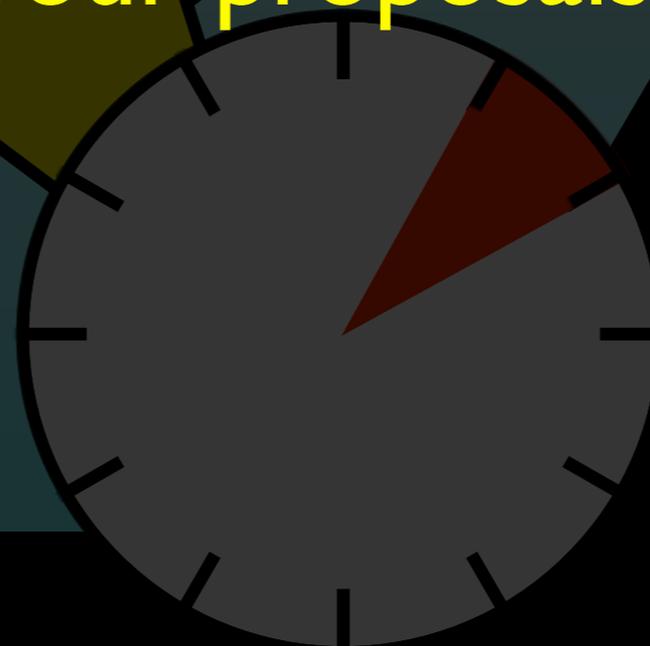

PIPT

PIPT

The PIPT lets you create, submit and resubmit your proposals.

Prebinned Rows: 4

Prebinned Columns: 4

Gain: Bright

	Proposal	Salticam
Effective exposure time:	160004003.00 s	4000.00 s
Overhead time:	2734.80 s	n/a
Total charged time:	160006737.80 s	4000.00 s

Blocks

A Block is the smallest unit which can be scheduled.

In other words: All the content of a Block will be observed in one go, whereas different Blocks may be observed at different times.

Keep in mind...

- When you want to add or remove something, the right mouse button is your friend.
- Pay attention to the overhead times!
Sometimes the overhead can be reduced significantly by choosing a more appropriate filter sequence.

Keep in mind...

- Don't forget about the track length.
- Red colour means that something is missing (but this isn't entirely reliable).
- You must have an account at <http://wmteaching.salt.ac.za/wm> before you can submit a proposal.
- Remember: Help is only an email away!

Web Manager

The Web Manager allows you to view your proposals, and it allows the SALT Astronomers to make administrative changes.

It is an online application, so you just need a browser for using it.

You can find it at <http://wmteaching.salt.ac.za/wm>

P Proposal 2008-1-RSA-001

General

Title

Observations of the Eruption of U Sco

Code	Phase	Semester	Submission date
2008-1-RSA-001	2	1 / 2008	01/04/2009

Abstract

High speed slotmode photometry of the recurrent nova U Sco will be observed when the system goes into an outburst, which is expected to occur anytime over the next year or so (2009.3 +/- 1).

Warnings

This proposal is final and is going to be observed!
