UCT Department of Mathematics and Applied Mathematics

Reading Module Form

Students in both MAM4000W and MAM4001W can take reading modules in subjects (in pure and applied mathematics) that are not offered as taught modules.

- *You may not take a reading module if a taught module covering essentially the same content is offered that year. For example, you cannot take Core Topology as a reading module in the 2nd semester instead of as a taught module in the 1st semester.*
- *You may, however, take a reading module that covers material that expands on, or is complementary to, the material in a taught module (particularly if this will better prepare you for an intended MSc). For example, you could consider taking a reading module in Algebraic Graph Theory after completing the taught module in Graph Theory.*
- *You must find a supervisor in MAM who is willing to supervise you.*
- *You must get permission from the Honours Program Convenor.*

*Please fill in the form below, make sure you (the student), your supervisor, and the Honours Program Convenor have signed, and then email the completed form to the Postgraduate Administrator Mrs Tanya Hannival (*tanya.hannival@uct.ac.za*)*

Information about the student	
Full name:	Student number:
Email address:	
Course (MAM4000W or MAM4001W):	

Information about the supervisor
