

Hake – Working Paper 2

Spawning biomass trajectories (Figure 1) and projection results under OMP2014 (Figure 2) are plotted for three assessments:

- “RC2016”: The 2016 RC (RS1 of MARAM/IWS/DEC16/Hake Asses/P1);
- “RC2014”: The RC at the time OMP2014 was adopted; and
- “RC2016 with 2014 data”: as a) above but with data as in b), except for the catches.

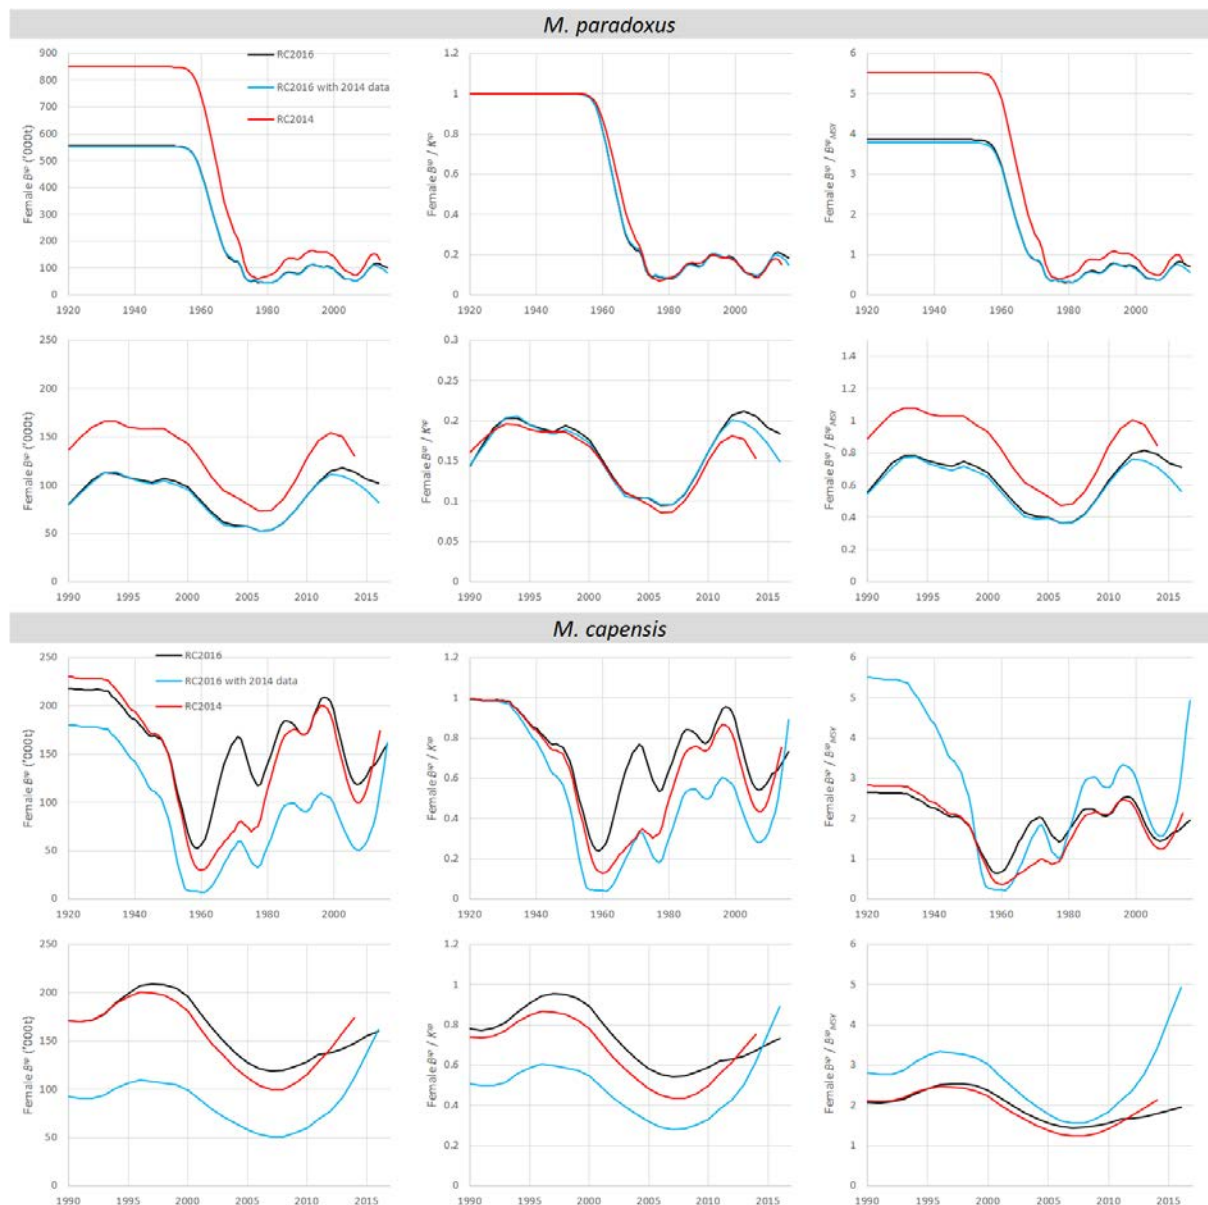

Figure 1: Spawning biomass trajectories (in absolute terms, and relative to pre-exploitation level and to B_{MSY}) for *M. paradoxus* and *M. capensis*, for the three runs. For each species, the second row repeats the first row but with a different range of years.

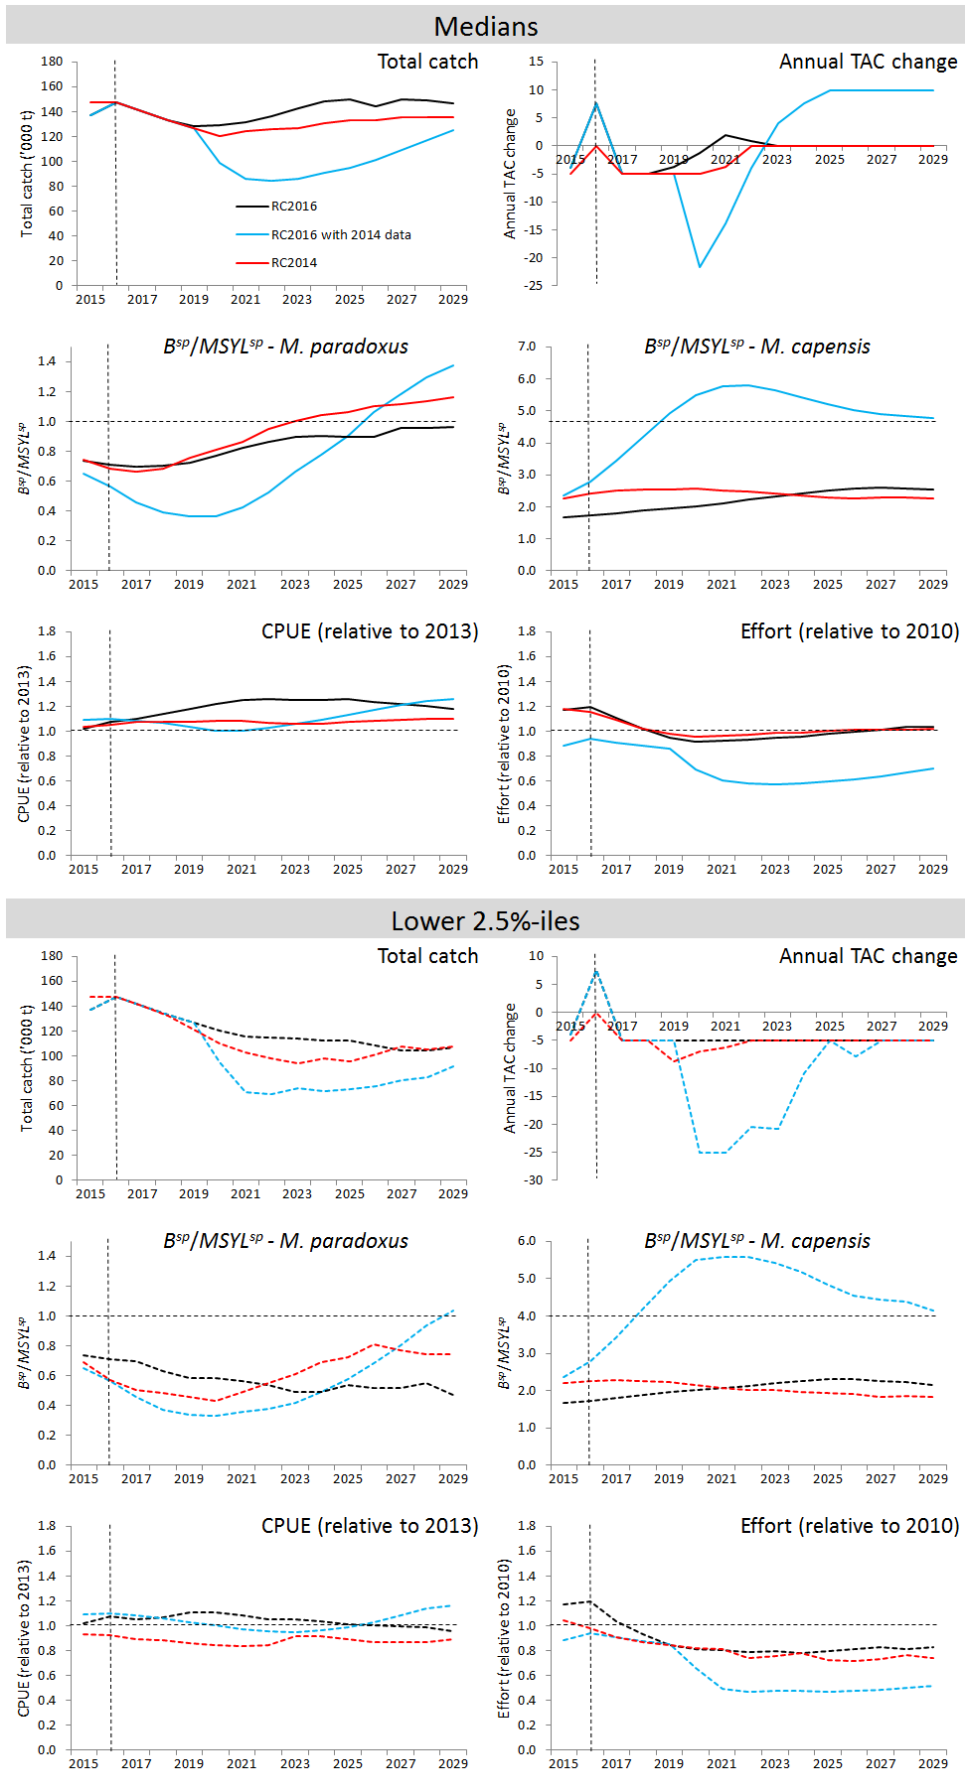

Figure 2: Medians and lower 2.5%iles for the three runs under OMP-2014.
