

Input data required for the implementation of the 2010 OMP for West Coast rock lobster

S.J. Johnston

Catches

Total (i.e. combined over all five super-areas) takes for each season are required. These are:

1. Commercial catch for seasons 1990¹-2009.
2. Recreational take for each season 1990-2009. [What was assumed for the OMP testing to 2007, and thereafter the proportion of global TAC set aside for this group]
3. Poaching estimate for each season 1990-2009. [Fixed at 500 MT]
4. Near-shore rights holders' allocations for 2007-2009
5. Interim relief catch estimates for 2007-2009
6. Offshore Commercial TAC allocation per super-area for 2008-2009

At a super-area level the following data are required:

1. Commercial TAC values for 2008-2009

Further input data

Trap CPUE for Areas 7 and 8 for 1993-2009.

Hoopnet CPUE for Areas 1+2, 3+4, 5+6, and 8 for 1993-2009.

FIMS abundance index estimates for Areas 3+4, 5+6, 7 and 8 for 1992-2009.

Somatic growth estimates for all five super-areas for 1992-2009.

¹ The convention is that 2009 refers to 2009/2010 season
