

## Textbook

The prescribed textbook is *Matter and Interactions* 4th Edition, Ruth Chabay and Bruce Sherwood, John Wiley and Sons, 2015. The lectures follow the textbook very closely.

## Communication

Notices, schedule changes, and other course material will be posted on the PHY1004W Amathuba site. You will also receive email correspondence from time to time, so check your UCT email regularly.

## Computing

All students are required to have their own laptop. The numerical modelling of systems using a computer is a central part of the course. Instruction will be provided using the computer language Python, therefore CSC1015F/S (or equivalent) must have been passed or be taken concurrently. The VPython package is used in the textbook.

## Weekly problem sets

Each Friday morning a new weekly problem set will appear on Amathuba. Students are to work through all the problems by the end of the next week. (Students may consult with each other and approach the course tutor for help if necessary.) Full solutions to these problems must be handed in by each student on the Amathuba assignments tab set up for WPSs. Your WPS will be graded between 0 and 5 although your solutions will not be thoroughly checked. Worked solutions to the questions will be published on Amathuba for you to check your own work. Marks obtained for these weekly problem sets will contribute 5% towards the final course mark. *Note: These weekly problem sets and the tutorials are a good indicator of the type and standard of questions which can be expected in tests and exams.*

## Plagiarism declaration

Every student needs to read the lesson on plagiarism available on the course Amathuba site and complete the plagiarism declaration (available as a Amathuba Quiz) before the end of the first week. The use of generative AI is a form of plagiarism and should not be used in any form in any assignments unless explicitly requested in the task. The Physics Department will make use of plagiarism detection software in order to evaluate academic integrity, including the use of generative AI.

## Laboratory

Laboratory sessions for PHY1004W students take place on Tuesday afternoons (only) from 14h00. Certain laboratory reports will be designated as writing exercises, and particular emphasis will be placed in these on writing skills. Mr Mark Christians (Preparation Room in PHYLAB1) is the Technical Officer to whom all administrative queries should be addressed in the first instance. *There is a separate communication regarding laboratories.*

## Tutorials

Approximately once every four weeks, students will attend an afternoon tutorial session in RW James 3B instead of a practical. At the start of the tutorial session a selection of about four problems will be assigned. The class will then be formed into groups of three to work through the assigned problems at a whiteboard. Tutors will be present during the session.

## Class tests

There are 5 class tests which are written in PHYLAB1. Class Test 1 forms part of the Science Faculty test days in the first term. Attendance at all class tests is compulsory. Students missing a test for medical reasons will be required to write a make-up within three days of returning to classes, in consultation with the course convener.

## Formula sheets

A standard formula sheet for each semester (Modern Mechanics and Electromagnetism) will be provided and may be used in all class tests and both examinations.

## Assessment

PHY1004W is assessed as shown below:

5 x class (theory) tests	20%
Weekly problem set record	6%
Laboratory report record	12%
2 x laboratory tests	12%
June examination (2 hours) First semester topics	25%
November examination (2 hours) Second semester topics only	25%

You can check your up-to-date grades for the course on Amathuba. A final (aggregate) mark of 50% is required to pass the course. There is no sub-minimum for the two examinations.

The deferred examination for the June examination will be written in the last week of the July vacation, and the deferred examination for the November examination will be written in the January examination period, together with the supplementary examination for the course.

### Short leave from the course

If a student wishes to be granted an exemption or extension for a course requirement associated with a planned (future) short absence from the course, then there is a form to complete (available on the course Amathuba site). This form needs to be submitted to Jill Patel (Room 5.07 RW James) at least 3 working days prior to the period in question. Irreversible plans (such as flight bookings) must not be made before approval of leave is granted. Completion of the form is not required for medical certificates obtained on the day of unplanned illness.

### Attendance and exemptions

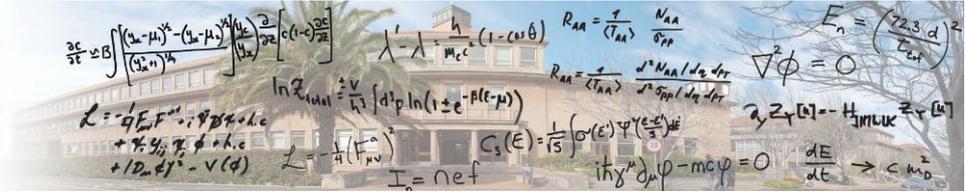

Attendance at practicals, tutorials, tests and examinations is compulsory. All students are expected to attend all practical and computational laboratories for the course, and complete all laboratory reports, other homework assignments, and laboratory tests (where applicable), and attend all white board tutorials. If you are ill and miss any grade-carrying activity, then a medical certificate from a registered medical practitioner needs to be presented to Jill Patel (Room 5.07 RW James) within 2 days of returning to classes, and a short form will need to be completed (available on the PHY1004W Amathuba site). You are also required to email the course convener indicating the activities you have missed. Students missing a test due to illness will be asked by the course convener to write a make-up test within a few days. Plans will also be made to hand in missed homework, tutorials or other assignments. Exceptions are only granted in very rare circumstances. An application for exemption from laboratory activities for students who are repeating the course must be made using the special form for this purpose (available on the PHY1004W Amathuba site) and presented to Mr. Christians in the first-year laboratory within the first two weeks of term.

### Duly performed (DP) requirements

A student will be regarded as having “duly performed” the work of the course, and thus qualify to write the final examination, if he/she has met the DP requirements for this course. DP certificates may be withheld from students who fail to meet these minimum requirements. Students who are not awarded DP certificates will not be permitted to write the final examination. The DP list will be published no later than one calendar week before the last teaching day of the course, and all grades recorded on that day will be used to consider the DP status of each student. Grades recorded after this date will be used in cases of appeal when a DP is not awarded. An appeal against a DP not being awarded is first made to the course convener, and thereafter potentially to the Head of Department (by email).

The following are the DP requirements for this course:

1. A minimum of 40% overall for the coursework component of the course (as determined one week before the last teaching day of the course); and
2. A minimum of 50% for the laboratory component of the course.

## PHY1004W lecture and class test schedule 2026

[MM: Modern Mechanics; EM: Electromagnetism]

Week	Date	Mon	Tue	Wed	Thu	Fri
