

Genomic research on South Africa's sardine stocks

Peter Teske, Arsalan Emami-Khoyi
and Samantha Ockhuis

Ecological Genomics & Wildlife Conservation

2023 panel: key suggestions

P-values vs. magnitude of correlation coefficient

Extract more information from the genomic dataset by using more environmental variables (not only SST)

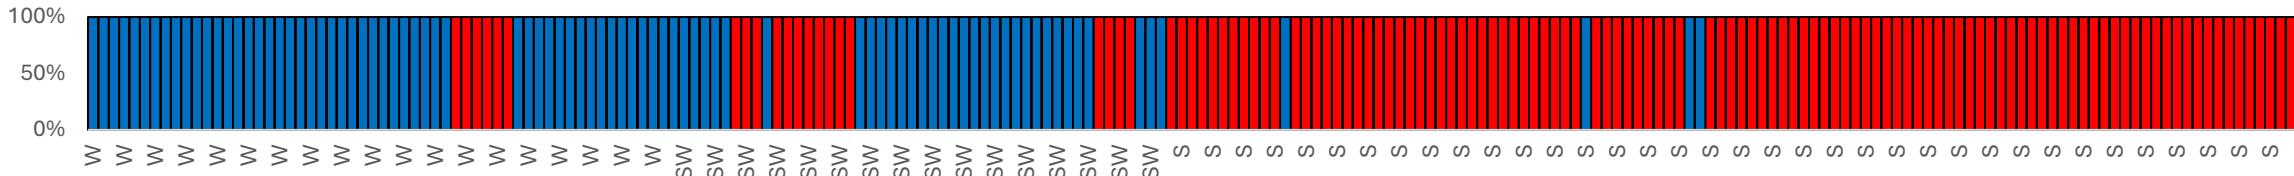

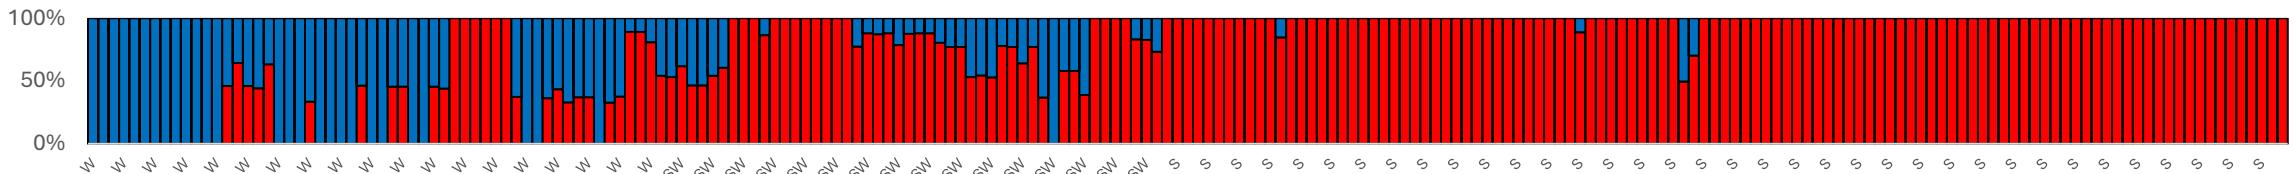

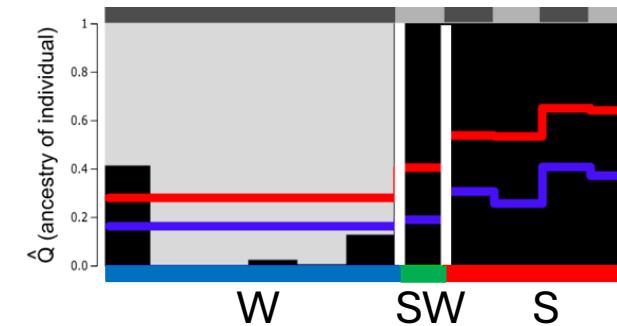

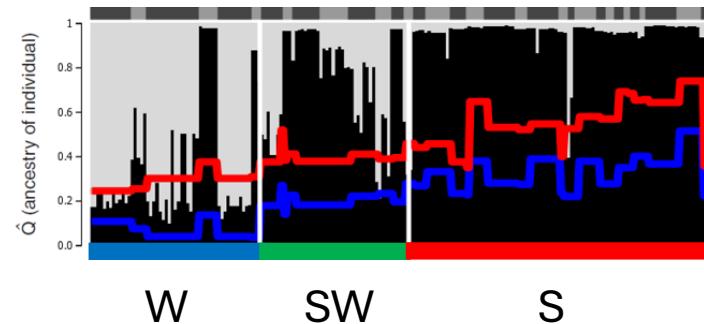

Explore selection

Finding genetic structure in such a high-dispersal species means there is strong selection (low genetic drift means fewer adaptive loci are stochastically lost)

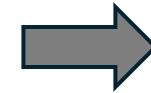

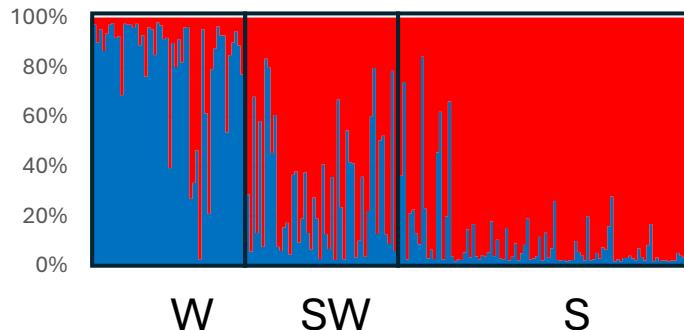

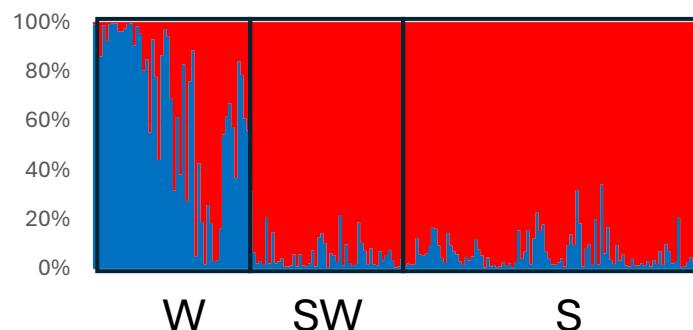

Exome data vs. Genomic data

Generate more data using the more informative approach

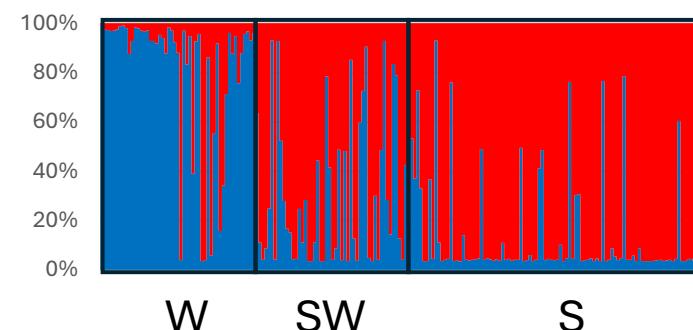

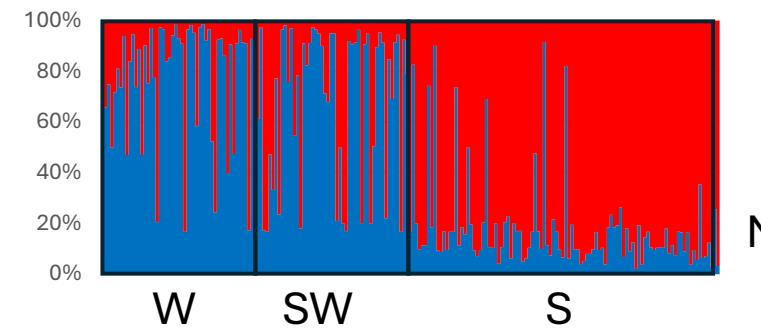

Sardine/P5

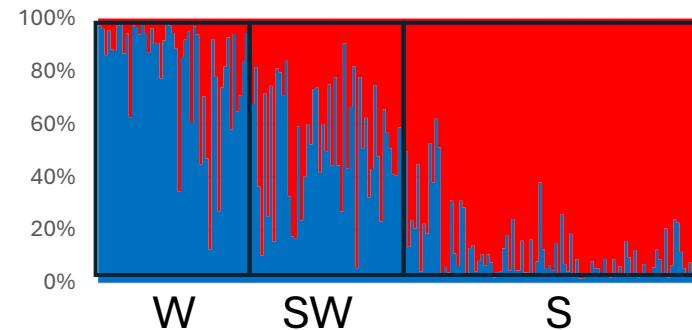

| | Counts | % |
|-------------------|--------|----|
| CTS in W: | 50 | 89 |
| WTS in W: | 6 | 11 |
| CTS in SW: | 34 | 69 |
| WTS in SW: | 15 | 31 |
| CTS in S: | 4 | 4 |
| WTS in S: | 105 | 96 |
